

Setting Preferences

The **Preferences** option allows you to save certain application options.

1. From the Tools menu, select Options. The Options window appears.
2. Select the Preferences tab.
3. In the Autosave section, select any of the following options:
 - **Login parameters** - At your next log in, EnergyCAP Enterprise automatically displays the datasource last accessed and the user ID used.
 - **Window state** - At your next log in, EnergyCAP Enterprise remembers the application window size.
NOTE: For dual-monitor users, EnergyCAP is now aware when the user has switched between a single- and dual-monitor environment. The application will auto-position itself so that a user on a single monitor setup will always see the application even if it was last opened on the second monitor in a dual monitor setup.
 - **Last view in workspace** - At your next log in, EnergyCAP Enterprise automatically displays the module and view you last accessed.
4. In the Catalog Server section, type the URL link to the XML list of available databases. Example: <http://servername/catalogservice/catalog.asp>

After making your selections, click OK.
